

We completed a survey to see how many birds and bugs we have in our playground.

We went to the Wanderer Woods to compare different features of an ideal habitat.

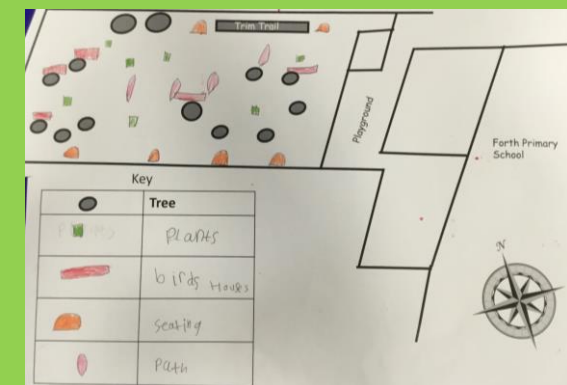

We made a poster about different habitats and wrote a report about the bugs and birds we learned about.

We installed our wormery, bug hotels and set everything up outside.

We built bird houses, feeders and painted our planters.

We made a plan of things we could make and where to put them to increase the biodiversity of our playground.
