

Rounding to the nearest Whole Number

6.38

lies between 6 and 7.  
It is closer to 6  
(the nearest whole number).

40.71

lies between 40 and 41.  
It is closer to 41  
(the nearest whole number).

Be able to round to the nearest whole number

When rounding to the nearest whole number :-

- => look at the first digit which comes just after the decimal point :-
- if it is a 5, 6, 7, 8 or 9 => round up to the next whole number.
- if it is a 0, 1, 2, 3 or 4 => leave the whole number before the point as it is.

- Examples :-
- 5.4 = 5 to the nearest whole number.
  - 2.8 = 3 to the nearest whole number.
  - 6.5 = 7 to the nearest whole number.
  - 8.399999 = 8 to the nearest whole number.

Exercise 3

To round numbers like 2.86497 to the nearest whole number :-

Step 1 - check what two numbers it lies between - (2 and 3)

Step 2 - decide which whole number it is closer to → 2.86497 → 3

5. Round these numbers to the nearest whole number, in the same way :-

m Three office workers won £2789 at the bingo. How much did they each get ?

n A plastic tubing 92 cm long is broken into 5 equal pieces. How long is each piece ?

o 2000 plants are shared equally between 12 neighbours. How many does each get ?

Here is how you can find remainders using your calculator.

- $147 \div 8 \rightarrow$
- Use your calculator to show  $147 \div 8 = 18.375$ .
  - Now find  $8 \times 18 = 144$ .
  - Now find  $147 - 144 \rightarrow$  remainder = 3.

7. Find the remainder in each of the following (using the method shown above) :-

- |                |                |                |                    |
