

Room 6

In Room 6 we pride ourselves on our ethos to always be kind to one another and to be the best we can be.

Within Literacy, we have explored the novels of Georges Marvelous *Medicine* and *The Worst Witch*. We have learned many reading strategies and incorporated expressive arts through our novel study. Hot seating characters, creating literal and inferential questions for a Guess Who game and even hosting our very own press conference with some characters from our novel are only some of the fun activities we have enjoyed. We have improved our technical aspects of writing and now aim to continue to work at a high standard to produce writing that engages our reader, linking with both our topic and novel studies.

Within Numeracy, we have enjoyed place value and learning our multiplication tables up to and including 10. We have created games for our peers, posters to explain tips and tricks to remember our times tables and even created a rap to remember the stations of the 6 times table. We have learned measure enjoying a potions class for capacity, measuring skyscrapers in centimeters for length and weighing real life objects in kilograms and grams.

Our topic this term has been Weather. This has involved researching different weather systems and climates around the world; exploring why the distance from the equator effects the weather we experience. We then learned about how we record weather, making our own rain gauges and creating weather reports that we presented to the rest of the class. As our learning progressed, we began to explore climate change, and this linked in with COP26. Our science topic is Electricity where we made our own circuits and learned about renewable and non-renewable energy. This linked well with our learning about COP26 and we invented our very own renewable energy source. We will continue to explore COP26 and what it means to us and our future.

Room 6 have had a super start to the year and look forward to learning even more as we continue in Primary 4.
